Area Restaurants (see flyer)

Transferring to Texas License & Tag

As a student you do not have to change your driver's license or license plate to Texas, but if you do change your residence the following steps are to be taken.

1. Change insurance to Texas
2. Have your vehicle inspected at an official inspection site (ex. oil lube station, mechanic shop, they will have a sign out front saying they inspect)
3. Take your proof of insurance, registration, or title and vehicle inspection report to the Southwest Sub Courthouse located at 6551 Granbury Road (817) 370-4535. There you will pay taxes on your vehicle and receive your new tag.
4. Driver's License: Texas Motor Vehicle Department located at 6413 Woodway Drive (817) 294-1075. Proof of insurance and paying your taxes for Texas is required.

Top 10 Ways to Help Reduce Your Electric Bill

10. Clean your dryer lint screen every time you use it. Be sure the dryer has a clear path for exhaust, and it is not full of lint.
9. At night during the winter, turn down the heat and use an electric blanket if you need extra warmth. Electric blankets are very safe and efficient.
8. Avoid "shopping" with the refrigerator or freezer doors open. It will have to run longer to overcome the warm, humid air you let in. Get in and get out! If you notice a buildup of ice in the freezer, please call the Physical Plant (817/923-1921, ext 2290) for assistance. An ice buildup makes the appliance run longer.
7. Don't use hot water unless you need to. Use cold water while brushing teeth, rinsing dishes to put in the dishwasher, etc.
6. If you will be gone more than overnight, set your heat to 55 degrees, or your air conditioning to 85 degrees. There is no need to condition your house when no one is home.
5. If you have a dishwasher, use it. Dishwashers are one of the most efficient appliances you have, if fully loaded. Washing a full load of dishes in a dishwasher may actually be cheaper than hand washing. If there is a "no heat" option, use it for even more savings.
4. Crock pots are another very efficient appliance, and some pretty good food can be made with little effort. Consider dusting yours off and using it!
3. Use a microwave for heating and a toaster oven for baking, rather than the oven. They use half the energy that an oven uses, with less heat wasted. If you do use the oven, avoid wasting the heat by peeking!
2. Turn off your PC at least every night. A computer uses about \$100 of electricity annually if left running continuously. You will save some of that energy if you turn it off every night, or even more frequently.
1. Sign up for the average billing or balanced billing program offered by your retail electric provider (REP) **today!** This will smooth out the highs and lows of your monthly bills, making them very predictable. If your REP does not allow you to sign up without building many months of history, there are other providers who will estimate your usage and sign you up right away.
